PROJECT ABSTRACT SUBMISSION

COURSE: DATA SCIENCE– (24AD3107)

A.Y. 2026 - 2027

TITLE OF THE PROJECT	**"AgriIntelligence"- End to End Crop,Weather & Market Analytics Platform**	
S. No.	**University ID**	**Name**
1	2420030770	KASI SAI AKASH
2	2420030631	TEDLA SHREEJA
Name of the Guide		**Prathusha**

Abstract:

AgriIntelligence is an end-to-end agricultural analytics and decision-support platform that integrates crop yield, weather, and market-price data to provide useful insights for crop planning. The system performs data preprocessing, integration, exploratory analysis, and feature engineering before applying Random Forest-based machine learning models for crop-yield and market-price prediction. It also analyzes rainfall, temperature, and humidity to identify weather-related agricultural risks. Based on predicted yield, market prices, and weather conditions, the platform provides crop recommendations through an interactive Streamlit dashboard. The system brings multiple

agricultural factors together in a single workflow, allowing users to view historical trends, predictions, risk levels, and recommendation insights. The proposed platform can be further enhanced using real-time agricultural data, soil and satellite information, advanced machine-learning models, and weather forecasting.
